

Download pdf for android free

Continue

To believe it or not, finding files on your iPhone or Android phone can be tougher than you think. After owning your smartphone for some time, it can quickly become an enigma. Most of the apps you need to get through your day, it's packed with photos, videos, files, and other media. While it's all too easy to download a photo or a restaurant menu to your mobile device, when it comes to actually finding where downloads reside on your phone, the opposite is true. It can be difficult to find a particular file amidst heaps of other folders. Worry not! In this guide, we'll explain where to find downloaded files on iPhones and Android phones, including Google Pixel and Samsung devices. We'll show you where to look to find your downloaded media and what to do to access the files. How to find downloads on iPhoneIf you own an iPhone, go to the Files app to find your downloads. Files can be used to store everything from photos to saved GarageBand songs. If you've downloaded something in the past, you're almost certain to find it there. Here's how: Step 1: On the Home screen, tap Files. Step 2: If you aren't taken immediately to the Browse screen, tap the Browse folder icon at the bottom-right of the screen. Within Browse you'll see several options listed under Locations. Choose one of the next three steps (3, 4, or 5): Step 3: Cloud: Tap iCloud, Google Drive, Dropbox, Amazon Drive, or any other cloud-based to access files stored in those accounts. Step 4: Local: Tap On My Phone to see all files downloaded to your device. Step 5: Recently Deleted: Open this folder to search for any files you may have accidentally deleted. Step 6: Tap iCloud Drive. Step 7: Tap Downloads on the following screen. If you still can't find what you're looking for, you can tap the search bar and enter the name of your downloaded file. If you can't remember the exact name, you can type the first few letters, which prompts the app to suggest likely candidates. How to find downloads on Samsung phonesFor Samsung smartphones, much the same principle applies, but with slightly different names. Step 1: Open the app drawer and either tap the My Files icon or open the Samsung folder and access it from there (depending on the phone). Step 2: Under Categories, tap Downloads. Note: The My Files app provides other categories as well that separate files into types: Images, Videos, Audio, Documents and Installation Files. Check these categories if you can't find your file(s) using the Downloads category. Step 3: You can also use the Search field on the app drawer to locate a specific download. How to find downloads on Google Pixel phonesTechnically, these steps apply to Google's Files app that can be used on any Android phone, not just the Google Pixel series. Step 1: Open the app drawer and tap the Files app. Step 2: The Clean tab opens by default. Scroll down and tap the Downloaded Files card. Alternatively, tap the Browse tab at the app's bottom followed by Downloads on the following screen. Both lead to the same location. Step 3: On the Downloads screen, you can switch between Thumbnail and List views. Next to this button is a three-dot "More" icon presenting a drop-down menu with Sort By and Select All options. In online forums, a small minority of Google Pixel owners have reported an inability to find downloaded photos or files in the Files app. Usually, this is the result of a permissions problem stemming from using the Google app to download images. Step 4: To solve it, go to Settings > Apps > Google > Permissions. Step 5: Next, make sure Storage permission is switched on. If it isn't, downloaded files will continue to be sent to a separate system directory. How to find downloads on Android phonesFinding downloads on other Android phones follows pretty much the same workflow as finding them on Google Pixel or Samsung phones. However, depending on the models and manufacturers involved, the app name may differ. As a rule of thumb, you need to do the following: Step 1: Open your app drawer. Step 2: Open the file manager on your phone, which will be named something along the lines of Downloads, File Manager, or My Files. Step 3: Select the Downloads file folder. Note: If you can't see your Downloads, first navigate to Internal Storage, and then you will be able to access the appropriate folder. You can also use the search bar to quickly bring up or check to see if you accidentally sorted it into another folder. Don't forget third-party appsDownloading files from an app might mean that the files are saved to that app's home folder instead of to the Downloads folder. Netflix is a frequent example of this. Step 1: To find Netflix downloads, open the Netflix app. Step 2: Tap the Menu icon in the top right corner of your screen, and select My Downloads. This could also apply to other apps on your iPhone or Android device. If you used a particular app to download a specific file, try checking within that application to access the file. This should be the method you try if you can't find the file in the standard download folder as well. Editors' Recommendations Open the Files app and select the Downloads category. Tap and hold the files you want to delete to select them. Tap the Trash icon. Android asks if you're sure you want to delete the selected files. Confirm that you do.Note: You can also use the Files app to delete unwanted images, videos, audio, and more. This article explains how to get rid of unwanted downloads on an Android device. It's not hard, but locating the files can be tricky if you don't know where to look. Every Android device has a specific app to manage your downloaded or saved files, but it may take a bit of searching to find, depending on your device. Here's how you browse through the different files you have. When you delete files on your Android device, they are gone permanently, so be sure you really do want to delete them completely before following these instructions. The app you are looking for is going to be called either Files or My Files, depending on the age of your device. To find the Files app, open the App Tray on your device. You may have to search a little. Look in a Tools folder if you don't see it directly on the App Tray. Inside the Files app, you can browse several different categories: images, videos, music, etc. From here, you can tap files to access them or tap and hold to select multiple files at once. Depending on the type of file, there are different actions you can take once you have multiple files selected. Pay a special note to the Documents section. If you've downloaded PDFs — tickets to an event, a restaurant menu, etc. — from a browser on your mobile device, they often just sit on your phone, taking up space. Downloads from your web browser are stored in your downloads file, so when you delete them directly from the file, there's no need to delete them from your browser. If you want to double check that, however, you can always open your web browser and go to Settings (usually represented by a three dot or three line menu icon) > Downloads to ensure all the files you want to delete are gone. Once you've selected the files you want to delete, tap Delete, which is usually represented by a trash can icon. You may be prompted to confirm you want to delete the files. Tap Delete or Yes, depending on your operating system, to permanently delete the files. Android, deleting your files is a snap. Here's how you do it. Tap and hold your finger on the file you want to delete, then select either the Delete option or the Trash icon that appears. You can select multiple files to delete several at once. Each one should receive a check mark if you tap and hold down on it — check several of them before selecting delete to take care of many files at once. After you select to delete files, you will be prompted if you really want to delete those files. They are gone for good once you select OK, so make sure you've chosen wisely. Downloaded files can take up lots of space on your Android. If you've never installed an additional SD card or added space to your phone, that can be a valuable commodity! It's a good idea to clear out space every so often so you can download more of your favorite apps, music, and videos. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! Android 7, which bears the delicious Nougat codename, is out and it offers split-screen views and more interactive notifications. As exciting as that is, you may need some help getting it onto your device and learning how to make the most of its new features. With our guides for getting the update onto Nexus devices, splitting your screen and mirroring Chrome and other apps, you'll quickly become nimble in Nougat.Image Credit: Asif Islam/ShutterstockAndroid 7 Nougat Tips Google is gradually releasing versions of the Chromebook software (Chrome OS) that supports the Google Play store. If you aren't sure your device supports Google Play, Google provides a growing list of devices that support it. If you are still uncertain, make sure your Chromebook is up to date and can run Google Play, check the current version. Here's how. In the lower-right corner of the screen, select the taskbar (where the time displays). Select Settings (which looks like a gear). Select About Chrome OS. Select Advanced if you don't see this option. The version of Chrome OS appears on the right side. After you've confirmed you have the correct version, open the Play Store. (If you recently updated, you should have seen this install.) If you don't have version 53 or higher, select Check For Updates to see if there's an update for your Chromebook. Now it's time to find some apps to install. Select the Start button (which looks like a white circle). Either enter Play Store in the search menu or select the up button to display more apps. Select the Play Store icon. Now you're ready to find fun and productive apps. At the top of the screen, select the box that says Google Play. This is the search box you'll use to find apps. Enter your search criteria and press the Enter key. For example, if you need a calendar app, enter calendar. The search results appear. Select each result to read a summary of the app, see some screenshots, and read reviews of the app. Some apps are not free or have in-app purchases to enable certain features. When you decide on an appropriate app, select Install. The view shows the app is downloading and has a progress bar to show its installation progress. Once the app is installed, the app information screen displays an Open button instead of Install. Alternatively, go to the apps list and click the icon. You now have a new app to play with. The Google Web Store is what Chrome OS systems used before Google implemented access and usage of the Google Play store. While many apps are listed in both places, the Web Store may not have the selection the Play Store has. Select the Start button (it looks like a white circle). If Web Store doesn't appear in the Frequent Apps list, select the Up arrow to see all apps. Select the Web Store icon. A Chrome web page appears. Select the Apps heading. From here, in the upper-left corner under the Chrome Web Store logo, enter your search criteria for the app you want. After you enter your search criteria, press Enter. Just like on the Play Store, selecting a listing provides additional information on the selected app. After you decide which app you want to install, select Add to Chrome in the app details window. Alternatively, select Add to Chrome in the app search results window. After you select the Add to Chrome button, a dialog box appears and asks if you want to install the app. If so, select Add extension. Once the installation has completed, another dialog box appears notifying you of the completion. In the app search list, you'll find a green button to Rate It and a small green banner on the app stating Added. Or, in the app details view, it says Added to Chrome. If this is your view, then the app is installed and ready for you to use. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why!
